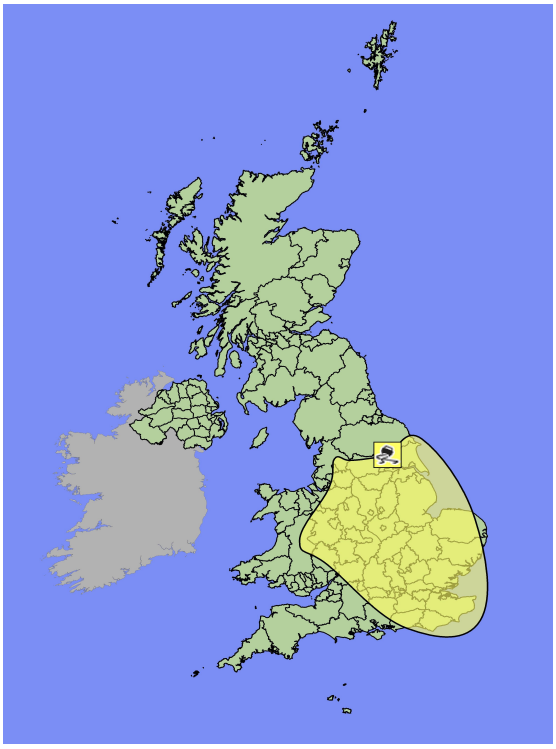
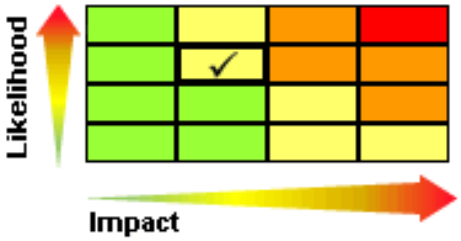
National Severe Weather Warning Service





Chief Forecasters Assessment
There remain uncertainties in the likely extent of icy surfaces tonight as the timing between rain clearing and roads then falling below freezing will be critical. The balance between rain and snow in the east also remains uncertain, and will depend largely on the intensity of the precipitation. The risk is greater on higher ground.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **00:05 on Fri, 07th Dec 2012** until **10:30 on Fri, 07th Dec 2012**

Following the southeastward clearance of rain overnight, temperatures will fall close to freezing over much of the area leading to the formation of ice on untreated surfaces. In addition, an area of rain, sleet and some snow is expected to move southwards across eastern parts of the region, clearing southeast England in the late morning. This may give a cm or two of snow locally.

Rain or sleet showers with some hill snow will move south overnight. This will leave surfaces wet, and prone to freezing as skies clear and temperatures fall. A further centimetre or two of snow could accumulate over hills. The public should be aware of the potential for increased iciness and possible disruption to travel
